

Full manuscript instructions

Below you will find our guidelines and technical instructions for preparing proceedings papers. These may be stand-alone proceedings or part of a series.

Preparing your proceedings paper

1. For your convenience, we have summarised in the "[Author Guidelines](#)" document how a proceedings paper should be structured and how elements (headings, figures, references) should be formatted using our predefined styles. We also give some insight on how your paper will be typeset at Springer Nature.
2. The PDF of the Author's Guidelines can be downloaded here or as part of the zip files containing the complete sets of instructions and templates for the different text preparation systems.
3. Springer Nature has developed LaTeX style files and Word templates to help you prepare your paper. LaTeX is the preferred format for texts containing several formulae, but Word templates are also available below. (both are attached)
4. Authors, editors, reviewers and publishers need to be mindful about research and its dissemination that may potentially harm population groups, as a result of discrimination in the assumptions or framing, methodology, interpretation or presentation of the research. We achieve this by presenting principles and guidelines intended to assist those considering the interests of population groups and also the ethical aspects of various forms of discrimination.
5. Springer Nature is committed to supporting clear and unbiased communication of research, consistent with our commitment to embedding inclusive principles in our editorial and publishing practices. We recommend that all authors review the Springer Nature Inclusive Language guide when writing, to ensure accurate, culturally sensitive, and bias-free language
6. As an author, you are responsible for the integrity of your work, and as such: (You should adhere to the standards as set out in our individual code of conduct and publishing policies, and you should review these as you are preparing your paper before submitting your manuscript)
7. ORCID (Open Researcher and Contributor ID) distinguishes you from every other researcher, ensuring you receive proper credit for your work. We recommend that you apply for an ORCID and encourage authors to do likewise.
8. Some institutions and funders will cover the fees for open access publishing, so they should be acknowledged.
